COVER LETTER

Date - 05/18/2026

Dear Hiring Team,

Great experimentation design is not just about aesthetics. It is about delivering fast, test-ready experiences that improve conversion, support growth strategy, and scale consistently across multiple digital channels. Creating those polished, performance-driven experiences is where I bring the strongest value.

With 2+ years of experience designing conversion-focused landing pages, responsive funnels, and experimentation-ready interfaces, I have contributed across CRO-focused workflows, paid media assets, lifecycle marketing experiences, and scalable production systems. My background includes building high-fidelity Figma systems, developer-ready handoffs, reusable components, and responsive digital assets optimized for usability, rapid iteration, and measurable business outcomes. I also actively use AI-assisted workflows including Claude, Cursor, ChatGPT, and Figma AI to accelerate ideation, production efficiency, and experimentation cycles.

What especially excites me about Cro Metrics is the focus on experiment-led growth, cross-functional collaboration, and production excellence at scale. The opportunity to contribute across A/B testing, lifecycle marketing, and rapid experimentation workflows strongly aligns with both my technical strengths and passion for high-impact digital execution.

Warm regards,
Falguni Dekate
